SECTION 01

Introduction

MGX is the native utility token of the MetaGuildX Protocol — a fixed-supply, on-chain token deployed on opBNB Mainnet. The MGX Token is distributed to community participants through a transparent, contract-defined mechanism and is designed to serve as the economic foundation of a progressively expanding decentralized protocol.

The MetaGuildX Protocol is a community building protocol where all token distribution, staking mechanics, and reward flows are executed by publicly deployed smart contracts. Every allocation, distribution event, and staking position is verifiable on-chain by anyone.

This whitepaper describes the MGX Token: its fixed supply, allocation model, distribution mechanism, staking architecture, and protocol roadmap. All information is based on verified deployed contracts.

511,750,000 MGX	opBNB Mainnet	ERC-20	Box Release
Fixed Supply	Chain ID: 204	Public Standard	Distribution Model

SECTION 02

Core Principles

Principle	Description
Fixed Supply	511,750,000 MGX. No additional tokens can be minted. Enforced at the contract level.
Public Smart Contracts	All contracts are deployed on opBNB Mainnet and open to independent review.
On-Chain Verification	Token supply, balances, distribution state, and staking positions are verifiable on-chain.
Transparent Distribution	Community MGX is distributed through the Box Release System — a contract-defined mechanism.
Community Participation	Token distribution begins from the first day of participation and is accessible to all.
Progressive Decentralization	Governance evolves toward increasing community participation and future on-chain decision-making.

SECTION 03

Vision

The MGX Token is designed to:

- Reward community participants through a transparent, on-chain distribution system
- Enable staking with verifiable, contract-defined reward mechanics
- Serve as the shared economic layer across all MetaGuildX Protocol phases
- Maintain a permanent fixed supply with no inflationary mechanism

The MetaGuildX Protocol is built on the principle that every token allocation, distribution, and protocol action should be publicly verifiable on-chain.

Transparency, fixed supply, and progressive decentralization are architectural guarantees enforced at the smart contract level on opBNB Mainnet — not aspirational commitments that depend on discretionary governance decisions.

SECTION 04

MGX Token

Property	Value
Name	MetaGuildX
Symbol	MGX
Network	opBNB Mainnet
Chain ID	204
Contract	0x04103b36Ac638f4156Ca07149942Eb37ffD8bA81
Standard	ERC-20
Total Supply	511,750,000 MGX
Mint Policy	Fixed – no additional minting possible
Decimals	18

The total supply of 511,750,000 MGX was minted in a single launch transaction. The `launchMinted` flag is permanently set to `true`. No mechanism exists to create additional tokens. This is verifiable on the opBNB Mainnet block explorer.

Fixed Supply	No Minting	On-Chain
511,750,000 MGX total	<code>launchMinted = true</code>	Verifiable on opBNB

SECTION 05

Token Supply and Allocation

Community — 60% —
307,050,000 MGX

Liquidity — 20% —
102,350,000 MGX

Reserve — 20% —
102,350,000 MGX

Liquidity Allocation

- **51,175,000 MGX** — Staking reward pool. An initial tranche of 10,235,000 MGX is funded to the deployed staking contract. The remainder is staged for release.
- **51,175,000 MGX** — DEX liquidity, reserved for the DEX phase of the roadmap.

Reserve Allocation

The 20% reserve is allocated for protocol development, security, infrastructure, and future expansion. Reserve utilization is executed through the governance framework.

SECTION 06

Community Distribution — Box Release System

Community MGX (307,050,000 MGX — 60% of total supply) is distributed through the Box Release System: a contract-defined, on-chain mechanism that progressively increases the distribution price per MGX Token as the protocol grows.

Box Release Table

Box	\$/MGX	Alloc	Amount	Box	\$/MGX	Alloc	Amount
1	\$1.00	20%	61,410,000	7	\$2.50	7%	21,493,500
2	\$1.25	15%	46,057,500	8	\$2.75	7%	21,493,500
3	\$1.50	12%	36,846,000	9	\$3.00	7%	21,493,500
4	\$1.75	10%	30,705,000	10	\$3.25	6%	18,423,000
5	\$2.00	8%	24,564,000	Total	—	100%	307,050,000
6	\$2.25	8%	24,564,000				

The total protocol volume required to exhaust the entire community allocation across all ten boxes is approximately **\$569,577,750**. Box advancement is fully automatic — when a box's allocation is exhausted, the smart contract advances to the next box without manual intervention.

Distribution Lifecycle

When the Box 10 allocation is fully distributed, the MetaGuildX Protocol transitions from token distribution to token utility — a maturity milestone for the protocol. Mechanisms for continued token circulation may be introduced through future protocol upgrades executed under the governance framework at that stage.

SECTION 07

Token Utility

MGX Token utility expands across each protocol phase:

Phase	Status	MGX Utility
Community Building	Live	On-chain distribution reward on every registration and upgrade
Staking	Planned	Rewards distributed from the funded on-chain staking pool
DEX	Planned	Trading pair, liquidity provision, trading fee participation
NFT	Future	NFT creation and marketplace transactions
Gaming	Future	In-game economy and reward distribution
Metaverse	Future	Virtual economy participation

The MGX Token is the shared economic layer across all MetaGuildX Protocol phases.

SECTION 08

Staking

Deployed Infrastructure

The MGXStaking contract is deployed on opBNB Mainnet with the initial reward pool funded.

Property	Value
Contract	0xD18E7b23AeD67340bf974311d490cd4b903e26A3
Current Reward Rate	0.03% per day (3 basis points)
Lock Periods	30 / 90 / 180 / 365 / 730 days
Lock Multipliers	100% – 115% (proportional to lock duration)
Action Fee	20% on withdraw and add-to-stake (returned to reward pool)

The reward rate is the current contract parameter and may be modified through future protocol upgrades under the governance framework as conditions evolve. The action fee mechanism recycles value back into the reward pool, supporting long-term sustainability.

Community Activation

Staking infrastructure is deployed and the reward pool is funded. Broader community activation follows protocol adoption milestones.

Staking Mechanics

Participants stake MGX Tokens for a chosen lock period. Rewards accrue daily, proportional to each participant's share of total staked MGX. Rewards may be claimed, compounded, or withdrawn after the lock period ends. Settlement and execution are performed entirely by the deployed on-chain smart contracts.

SECTION 09

Ecosystem Roadmap

The MetaGuildX Protocol is designed as a nine-phase ecosystem. Each phase expands MGX Token utility and community value.

Phase / Title	Status	MGX Utility
01 — Community Building	LIVE	On-chain token distribution to all participants
02 — MGX Token	ACTIVE	Fixed-supply token fully live and distributing
03 — MGX DEX	PLANNED	Native trading pair and DEX liquidity deployment
04 — Staking Activation	PLANNED	Community staking rewards from funded pool
05 — Trading Platform	PLANNED	Advanced trading and market infrastructure
06 — NFT Creation	FUTURE	NFT minting within the ecosystem
07 — NFT Marketplace	FUTURE	NFT trading and community marketplace
08 — Gaming	FUTURE	In-game MGX economy and rewards
09 — Metaverse	FUTURE	Virtual economy and digital experiences

This roadmap represents the long-term vision of the MetaGuildX Protocol. Development priorities may evolve over time. No guaranteed delivery timeline is implied.

SECTION 10

Smart Contracts

All MetaGuildX Protocol contracts are deployed on opBNB Mainnet (Chain ID: 204) and are publicly verifiable.

Upgradeable Architecture

Contracts use UUPS upgradeable proxy architecture. Protocol upgrades are executed through the governance framework.

Governance

The MetaGuildX Protocol operates under a governance framework designed to evolve toward progressive decentralization and future on-chain community governance as the protocol matures.

Audit Status

A third-party smart contract audit has not yet been completed. All contracts are publicly deployed and open to independent review.

SECTION 11

Risk Disclosure

Participation in the MetaGuildX Protocol and holding MGX Tokens involves significant risks:

Market risk. Token values are not guaranteed and may fluctuate significantly or decline to zero.

Smart contract risk. Despite internal review, smart contracts may contain undiscovered vulnerabilities. A third-party audit has not yet been completed.

Regulatory risk. The regulatory treatment of blockchain tokens varies by jurisdiction and may change. Participants are responsible for compliance with applicable laws.

Liquidity risk. MGX Tokens may have limited liquidity prior to DEX deployment. No guarantee exists that a liquid market will develop.

Protocol risk. Future phases are planned but not guaranteed. Development priorities may evolve.

Governance risk. On-chain community governance is not yet implemented. Community governance mechanisms are planned for future phases of the protocol roadmap.

This document does not constitute financial, legal, or investment advice. Participants should conduct independent due diligence and consult qualified advisors before making any decisions related to MGX Tokens.
